Stonite products:
Do not contain volatile chemicals
Do not burn or emit gasses
Can be used safely in means of egress
Do not contain or emit any hazardous material

NFPA 704

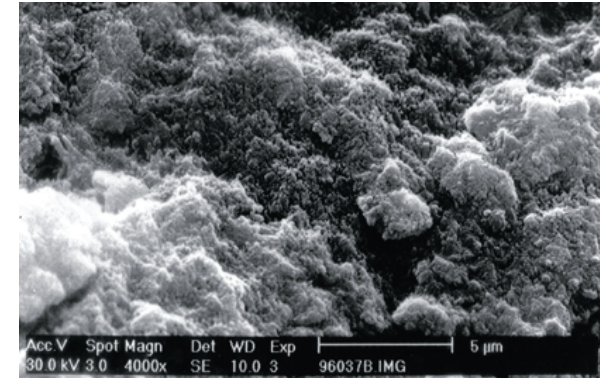

CLASS 0

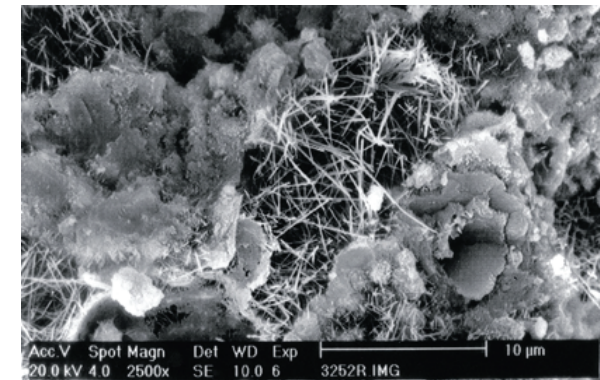

Durable and Strong

Stonite Terastone products are manufactured by utilizing "vacum vibro-compaction" technology developed by Breton of Italy. The final product has minimal water content and water absorption with homogenous aggregate distribution. It is very resistant to breaking even in thinner sizes and stain resistant due to its compact texture. It can withstand extreme temperature changes including freezing and desert conditions.

Stonite Terastone has a very compact texture

The porous texture of a classical terrazzo

STONITE Plant:

- Reclaims wasted aggregate from stone quarries
- Does not produce chemical waste or pollutant gasses
- Recycles 99% of water used in production

Solid waste is less than 15% of the raw material and consists of inert inorganic granules which can be used as filler material in construction.

Energy Efficient:
Stonite plant generates most of the energy used in production by solar panels on its roof.
